**Comments concerning proposed rulemakings**

The proposed new Chapter 5 Rules, which would bring state regulations up to federal standards for compliance with the Class VI Primacy process, would be an improvement over the current statute. However, I share Commission Shift's concern that federal regulations for CO2 injection do not take into account Texas-specific issues, and that the RRC's new rules will not be strong enough to protect our land and communities. I also urge RRC to provide directions for making a comment in Spanish, and to make the proposed rule amendments available in Spanish.
